

## Company Profile

**“An Engineering Company that Does Inspection”**. This is how Axiom is recognised by their clients, who benefit from the provision of a range of technical and risk management services. In essence, the company provides assurance and peace of mind to owners and managers of industrial manufacturing sites.

Through engaging with the company, Axiom will provide clients with a unique ability to understand the condition and integrity of their assets, from storage tanks to vessels, pipework and pumps.

Axiom provides professional engineering expertise and advice across the following areas:

### Materials

- Failure analysis
- Corrosion assessment and materials testing
- Expert Witness services
- Consulting on asset integrity and suitability of materials

### Mechanical Engineering

- Fitness for purpose assessments for pressure systems
- Remnant life and life extension studies
- Design modifications and specification of repairs

### Inspection & Testing

- UKAS accredited inspection of PSSR equipment and low-pressure storage tanks
- Condition monitoring
- Working with operators to indicate asset condition
- Integrated service, which will tie in remedial work and management reporting

### Asset & Risk Management

- Licensing of our unique and proactive asset management database
- At a glance status of all inspected assets on your personal database
- Preventative programs of inspection and testing
- Generation of management reports on condition of plant and key equipment
